

We're doing our bit for the environment.....

- 🌍 **WASTE:** Reduction of waste to landfill through reduced packaging & recycling. We are now successfully recycling
 - Glass
 - Cardboard packaging
 - Office paper
 - Newspapers
 - Plastic containers
 - Cans
 - Used cooking oil

This has reduced our landfill by 83000 litres a year, a huge 42% of the waste we generate. Not bad for starters!

Next on the list is food waste – the first service provider aims to start work in the Guildford area this summer.

- 🌍 **ENERGY:** Increased energy efficiency through staff awareness & reduced usage
 - Gradual move to low energy bulbs as they need replacing.
 - Power timers to optimise equipment usage e.g. overnight.
 - Movement sensors for lighting will be installed in the toilets & back of house areas.
 - Upgrade of boiler controls to optimise hot water supply.
 - Purchasing higher rated energy efficiency equipment when replacing kit.

- 🌍 **CHEMICALS:** Next up is a review of all chemicals used on site with an aim of reducing usage where possible or moving to more friendly products.

If you want to know more, have any ideas for what we should tackle next or suggestions on improving on the above, please speak to us – we want to know.
